A practice round folder contains the data and a README. In the Readme doc, three tabs exist:

1. The data prompt,
2. The data structure, and how the tabs connect, and the
3. Variables' definition.

Practice Round Prompt

We are interested in expanding the use of our GPS data. Using the dataset provided, analyze race outcomes using both traditional (non-GPS) data and GPS data variables. Assess how the inclusion of GPS data changes, refines, or enhances the interpretation of race performance relative to traditional race metrics. Specifically, focus on whether GPS metrics (stride, running_time, distance_ran..etc) can better predict finishing position/ horse performance than traditional point-of-call data alone. Highlight any new performance insights that can be derived from the GPS data and evaluate their analytical significance.

Task:

- Deadline: Submissions are accepted on a rolling basis until Monday, March 9th.
- Submission Process: The team leader may upload either a presentation video or slides, along with a written summary of the team's findings, as a LinkedIn post.
- If submitting a video, please ensure it does not exceed seven minutes. This duration will allow you to practice for the main event, as that is the allotted time for presentations.
